involved in production was partially lost in distribution because of the communal pooling for use purposes of food, clothing, and shelter. That pooling was not complete is evidenced in the fact that all products made by a deceased person were destroyed. Also clothing and implements were personal belongings and individually owned to a considerable degree.

The older people were the major authority figures as long as they were economically influential. With skill and experience they led their households and communities in every phase of life. However, older people who became an extreme burden on the household because of blindness or other disabilities were deserted and left to die. There are indications that this desertion was met with resignation on the part of the old person and with grief by the family, but was deemed inevitable. A corollary to this was the belief that persons acquired often dangerous supernatural powers with age (cf., Freed and Freed n.d.). Thus, well intentioned gifts from grandparents to grandchildren may be inadvertently harmful.

Generally everyone ate at the same time with the major meal often in the late afternoon. Producing men ate the most and producing women came next. Non-producing old people and children were resented for their supposedly great appetites and in practice probably ate much less than the others. Old people and children were often given the boiling stones and stirring sticks to lick off the cooked meal. Dangberg (n.d., 30) indicates that children were often fed rabbit brains, which adults did not prefer. Mothers prechewed solid foods for infants.

Familial sharing was extended beyond the household primarily through hospitality to visitors. In times of hunger whole households without food might move in with relatives or even unrelated neighbors. In this case private property such as cooking utensils were not pooled, but the food was shared. The two groups living together would cook separately. The guests would be expected to gather wood, bring in water, go hunting, and make what contribution they could.

There were starvation (bisha basha) times, particularly in the late winter, when the household would hide its food, even from relatives. Hank Pete said he heard of starving people who would tear apart their rabbit skin robes to chew the fat off the hides and divide a chipmunk between a whole family. It is said that people could go for ten to fifteen days without eating. Women would give their portions to the men and children because it was believed the women could go longer without eating. A different inventory of foods was used that would never be eaten in ordinary times.

844
[272] [263] After the child was born, great care was taken to prevent the mother from getting cold. She was given a drink of warm water with "sugar" (šigimba) from the sugar pine. She was then submitted to further pressure by the midwife in order to insure the complete removal of the afterbirth. Some say that she sat up with knees under her chin the first night after the infant was born to effect the final draining.

846
[262] [515] The woman could not eat anything except pinenut soup and was not washed until the umbilical cord (ʔiʔip) fell from the child, about four days later. The woman remained in bed about nine or 10 days and had an older woman as an attendant during this period. There were often several women in attendance, but the person designated as midwife handled the baby and tied the cord.

[834] For a month (for a young mother, two months) after the child was born the mother abstained from eating meat, fat, or salt. "A woman who had given birth to four children no longer observed this taboo (Jack)" (Lowie, 1939, 305). The parents abstained from sexual intercourse for up to six to 12 months after a birth. At the end of her confinement the mother bathed, painted herself, and gave away her old clothes.

844
[412] [752] [824] The umbilical cord was cut off about 4 in. from the child's abdomen with a stone knife or a sharp cane blade. It was then tied with a string or sinew an inch from the abdomen. After this the baby was washed and the cord bound to the abdomen with a strip of deerskin. Two medicinal roots were applied to the cord. A greasy salve (dõ·ša?)[1] was put on next to the abdomen and cottonwood tree bark (tšša? ?i·š) was placed on top of the cord before it was bound down. The cord and medicines were kept moist with water.

854
[853] [757] [824] Some say that the baby was not nursed by the mother for two days, but others seem to think there was no delay or that it was given warm water to suck from the end of a rabbit's foot. A baby powder was made from the ashes of the bark of the cottonwood tree. The baby was wrapped in woodchuck or rabbit skins. A grass or bark pad was put under the infant and changed when necessary.

844
[842] [754] After the child had been washed the afterbirth was disposed of. The piece of cord that had been cut off was coiled clockwise, placed back in the amniotic sack on top of the placenta, and the whole carefully wrapped in grass or bark and buried in warm ashes with the cord up. This was done in order that the mother would have more children. Should she not want any more children, the placenta was turned over and buried so the cord was on the bottom and was thus counter-clockwise. The midwife took care that no one watched where she buried the placenta for, if it were destroyed, illness would come to the mother.
